

## **LISTING OF CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **Claims 1-27. (Cancelled)**

**Claim 28. (Currently Amended)** A method for user equipment for a mobile communication system comprising:

receiving a message on said user equipment including a first list including a plurality of network identifiers ~~that are available~~ for a potential handover, said receiving from ~~the a~~ communication network while a call is in progress; and

comparing the received first list with a second list stored in the user equipment, said second list including at least one network identifier being an identifier of a network that is never to be used, wherein said mobile communication network signals one or more of the plurality of network identifiers available for the potential handover, and said receiving of said message occurs without said user equipment searching said mobile communication network.

**Claim 29. (Currently Amended)** User equipment for a mobile communication network comprising:

means for receiving a message that includes a first list including a plurality of network identifiers that are available for a potential handover, from the communication network while a call is in progress; and

means for comparing the received first list with a second list which includes at least one network identifier and is stored in the user equipment, the at least one network identifier in the second list being an identifier of a network that is never to be used, wherein said mobile

communication network signals one or more of the plurality of network identifiers available for the potential handover, and said receiving of said message occurs without said user equipment searching said mobile communication network.

**Claims 30. – 31. (Canceled)**

**Claim 32. (Currently Amended)** A mobile communications network or component thereof including:

means for receiving by a user equipment a message that includes a first list including a plurality of network identifiers that are available for a potential handover, from the communication network while a call is in progress;

means for comparing by the user equipment the received first list with a second list which includes at least one network identifier from the plurality of network identifiers and is internally stored in the user equipment, the at least one network identifier in the second list being an identifier of a network that is never to be used;

means for receiving from user equipment communicating with the network an indication of a preferred other network; and

means for supplying neighboring cell information for the preferred other network based on the indication, wherein said mobile communication network signals one or more of the plurality of network identifiers available for the potential handover, and said receiving of said message occurs without said user equipment searching said mobile communication network.

**Claim 33. (Currently Amended)** User equipment for a mobile communication network comprising:

a receiver for receiving a message that includes a first list of a plurality of network

identifiers that are available for a potential handover, from the communication network while a call is in progress; and

a comparator for comparing the received first list with a second list which includes at least one network identifier and is stored in the user equipment, the at least one network identifier in the

second list being an identifier of a network that is never to be used, wherein said mobile

communication network signals one or more of the plurality of network identifiers available for

the potential handover, and said receiver receives said message without said user equipment

searching said mobile communication network.
